

Maintenance Sheet Plan Change Number: G-9	
Plan Name: Approved Rawlins Resource Management Plan	Area: Rawlins Field Office, Wyoming
Page: G-9	Column: N/A
Paragraph: N/A	Line: N/A
Section/Heading: Intermittent Surface Waters	
<p style="text-align: center;">CHANGE</p> <p style="text-align: center;"><i>(Describe exactly what is to be deleted, added, rewritten, etc.)</i></p> <p>Delete: Streams, lakes, or other surface water bodies that have open water during a portion of the years, or, during particularly wet years, may have open water throughout the year. In the case of streams, this term can also refer to noncontinuous flow resulting from groundwater interaction (i.e., portions of the stream are generally dry and other portions are generally wet in most years).</p> <p>Insert: Intermittent surface waters have flowing water during certain times of the year, when groundwater provides water for stream flow. During dry periods, intermittent streams may not have flowing water. Runoff from rainfall and snowmelt are supplemental sources of water for stream flow.</p>	
<p style="text-align: center;">REASON</p> <p style="text-align: center;"><i>(Describe exact rationale for above change to include reference material, i.e. EA, EIS, IM, etc.)</i></p> <p>The original definition was incorrect. The definition is being corrected in accordance with the US Army Corps of Engineers definition.</p>
